EDUCATION

UC Berkeley – Management, Entrepreneurship, & Technology (M.E.T.) Program

Berkeley, CA

Dual Degree: B.S. Electrical Engineering & Computer Science + B.S. Business Administration

May 2027

- 1 of 50 students in the M.E.T. Program - less than 1% acceptance rate
- Coursework: Data Structures and Algorithms, Machine Learning, Computer Architecture, Internet Architecture, Computer Security, Digital Devices, Signals and Systems, Discrete Mathematics and Probability
- Societies: Free Ventures (Zero-Equity Startup Incubator), Berkeley SKYDECK Pad-13, Y Combinator Pioneers

EXPERIENCE

Stealth Startup (funded pre-revenue)

Sept. 2025 – Dec. 2025

Founding Engineer

San Francisco, CA

- Own AgentOps: Built novel **non-invasive browser agent** integrating directly into existing chrome sessions for seamless in-browser automation; Designed the **next-gen of user onboarding** – account setup in one conversation
- Implemented a custom, in-house parser engine to extract financial data (brokerage statements, 1040s, me transaction logs) from heterogeneous PDFs, improving downstream **data quality** for analytics and reporting
- Own DevOps & infrastructure: iterated CI/CD pipelines, automated testing and deployment workflows, and **scaled infra patterns** to support a growing engineering team and product footprint

MagicHour AI (YC W24)

Jun. 2025 – Aug. 2025

Software Engineer Intern – Generative AI Prototyping/Infra

Oakland, CA

- Architected an end-to-end GenAI pipeline using chained SoTA open-source models (Wan 2.1, Sam2, GroundingDino, NormalCrafter, ...) with quantization, depth/pose encoding, & frame stitching to launch **SoTA video head-swap** (unlike face-swap, not commercially produced by any competitors); tool serves **2M+ MAU**
- Enabled **48% GPU cost reductions** by LoRA-fine-tuning and quantizing models, converting them to TensorRT engines (improving inference scalability), then batching inference on A100s via Triton CUDA graphs

Happyrobot

May 2024 – Nov. 2024

Software Engineer Intern – Applied AI/Post-training

San Francisco, CA

- **Recommended** and built a layered post-phone-call analytics system using a Pinecone vector database + L2 distance/cosine-similarity + k-nearest-neighbors, sentiment analysis, & LLM-as-a-judge to trigger alerts for previously neglected urgent situations; **became core value-prop** for Happyrobot
- Designed, developed, and integrated a LLM eval pipeline using Langsmith and **5 custom benchmarks** adapted from SoTA research for evaluation/iteration **speed increases of 3-10x** per use case
- Fine-tuned LLMs to handle over-the-phone use cases; improved model performance by **30-60%** situationally

PROJECTS & CONTRACTS

Fashion:Week | Scroll-based Archive Fashion Platform - **Merging w/ Lowheads (2M+ ARR)** Jun. 2025 – Present

- React Native + Expo mobile frontends, Supabase relational/vector databases, Powersync data synchronization
- Trained collaborative-filtering based recommender system using Pytorch – powered by on-demand Modal clusters; Semantic search infra: 1M+ CLIP embedding vectors + cosine similarity querying + hybrid BM25- α reranking

FormPix | On-Device-Inference-Powered USCIS Form Filler Chrome Extension

Aug. 2024 - Nov. 2024

- Used Tesseract OCR + Liquid AI LFM2-350M to extract data from files and automate USCIS online form filling
- Conducted interviews with legal/immigration firms to diagnose pain points – **Contracts with 3 law firms**

Docker | College Student Developer Relations Project - **250k+ Social Media Impacts**

Mar. 2024 - May 2024

- Built AI-powered MERN-stack web app + trained RNN models to create personalized meal plans for Berkeley students based on dining hall menu/dietary preference; Designed microservice architecture enabled by Docker
- REST APIs for the backend (Node/Express) & AI models (TensorFlow/Flask) microservices; Hosted on GCP

SKILLS AND HONORS

Languages: Python, Java, JavaScript, TypeScript, C, C++, Go, HTML/CSS, Swift (SwiftUI), SQL

Frameworks: React, Next.js, Node.js, Expo, Flask, FastAPI, LangChain, PyTorch, OpenCV, Pandas, NumPy, Selenium

Technologies: AWS, GCP, Git, Docker, Kubernetes, Redis, PostgreSQL, No-SQL, Vercel, REST APIs, Modal, Railway

Specializations: Full-Stack Dev, ML/AI, ETL, Database Management, Cloud Computing, DevOps, PCB Design (4 fun)
